Bali® Shutters
Measuring and Ordering Guide

2½" Shutters with Standard L-Frame and Hidden Rear Tilt: Simply White 2051
Determine Your Window Type

Wood-wrapped window

Window Type 1
- Window opening with molding, without sill
- See install option A

Window Type 2
- Window opening with molding and sill
- See install option A

Drywall-wrapped window
(window edge can be square or rounded)

Window Type 3
- Window opening without molding or sill
- See install option B

Window Type 4
- Window opening without molding, with sill
- See install option B
Install Option A - Inside Mount Hang Strips

Shutters are mounted to the inside of the window jamb using hang strips.

- Hang strip is a vertical frame that is attached to the window jamb and holds the shutter panel and hinges
- Window jamb must be at least 2½" deep; if less than 2½", See Install Option C
- Hang strip and panels will sit completely inside the window opening

- Does the window have any of the following: crank handles, lever locks, alarms, or tilt in for cleaning?
- If you answered yes to any of the above, See Install Option C

How to Measure

1. Use a steel tape measure only.
2. Do not make any deductions, allowances, or additions to your measurements. Factory will make deductions for inside mount.
3. Measure to the nearest ¼".
4. To confirm the window is square, measure the diagonals. If the difference between the two is greater than ¼", an outside-mount shutter is required (see Install Option C).
5. Measure window width in three places and record the smallest measurement.
6. Measure window height in three places and record the smallest measurement.
Install Option B - L-Frame Mounted to Wall

Shutters are mounted on the wall surrounding the window using our L-frame. If the window has a sill, the frame will rest on top of the sill.

- There must be a minimum of 1¾" of wall space above, below, and on either side of the window for windows without a sill.
- If the window has a sill, there must be at least 1¾" of wall space on top and on either side of the window.
  
  **STOP** If less than 1¾" of clearance, you cannot install Bali shutters on this window.

- Cranks that project outside of the window jamb will need to have the crank handle removed to close the shutter.

---

**How to Measure**

1. Use a steel tape measure only.
2. Do not make any deductions, allowances, or additions to your measurements. Factory will make allowances, for frame.
3. Measure to the nearest ½".
4. If the window edge is rounded, place the tape measure beyond the rounded edge where the wall becomes flat.
5. Measure window width in three places and record the largest measurement.
6. Measure window height in three places and record the largest measurement.

Note: Manufacturing will add to the window measurements. The shutter frame will sit outside the window opening when installed. Outside mount only.
Install Option C - L-Frame Mounted to Molding/Trim

Shutters are mounted on the decorative molding or trim around the window using our L-frame. The L-frame will be screwed onto the molding/trim.

• L-frame installation can be used on windows with or without sills

• Molding must be at least 2" wide

• The outside edge of the molding (farthest from the window) must be the highest point of the molding

If your molding does not meet the above requirements, Bali shutters cannot be installed in your windows.

How to Measure
1. Use a steel tape measure only.
2. Do not make any deductions, allowances, or additions to your measurements.
3. Measure to the nearest 1/16”.
4. Measure window width in three places from the outside edge of the molding to the opposite outside edge. Record the largest measurement.
5. Measure window height in three places from the top outside edge of the molding to the bottom outside edge of the molding. Record the largest measurement.

Note: If the window has a sill, measure from the top edge of the molding to the top of the sill.

No deductions or additions are made to the sizes given. Manufacturing will make the frame to exact size provided.
**Divider Rails**

For panels over 72” in height, there will be a divider rail positioned at the center of the panel for structural strength. Divider rails can be requested for shutters under 72” in height. Use divider rails to create top and bottom sections. Louvers on top can be left open while bottom louvers can be closed for privacy.

**Louver Sizes**

2½” Louvers
- Traditional in style
- Minimal window depth needed
- Shutters are focal point of the room

3½” Louvers
- Most widely used louver size
- Offers more visibility and light control than 2½” louver
- Design flexibility when working with space around shutter

**T-Posts**

T-posts are vertical structural frame pieces on wide shutters to which panels can be mounted or closed. T-posts will be centered.

**Tilt Options**

Standard Front Tilt A ¾” wide composite bar is stapled to the louvers and controls the tilting of the louvers up or down. Tilt bar matches shutter color.

Hidden Rear Tilt A thin stainless steel bar is attached to the outside edge of the louvers on the back hinge side of the panel. Tilting of the louvers is controlled by moving any louver. Tilt bar is metal color.

**Light Blocks**

Light blocks are provided with Install Option A to fill light gaps on the top and bottom of the window.

**Installation**

Detailed pictorial installation instructions will be provided with the product. The installation instructions are also available on [Homedepot.com/bali](http://Homedepot.com/bali). Bali shutters are attached to the window or wall with Phillips head screws. You will need the following:

- Level
- Drill with a ¼” drill bit
- Phillips head bit or screwdriver
- Hammer or rubber mallet
- Steel tape measure

All screws, hinges, and hardware will be supplied with the product. Hinges, magnets, and catch plates will be pre-installed in the factory.

**Determine how you would like the shutter panels to open.**

*When ordering a divider rail on shutters that will be in the same room or side by side, order shutters at the same height to ensure divider rail location will match.

**Delivery** Shutters will be delivered in approximately three to four weeks. Product weight varies by size. Average shutter weighs 55 lbs.

**Shipping Damage** Report any shipping damage to the consumer hotline telephone number listed below.

**Changes/Modifications** Orders cannot be changed or modified after one business day from the original order date.
